

# Js Auto Form Validator

[DOWNLOAD HERE](#)

The JS Auto Form Validator is an easy-to-setup form validation script which enables you to handle the whole form validation process without writing any JavaScript code. This script allows you to specify certain form elements as "required" or "non-required" and also what specific type they have: text, password, numeric, zip code etc. The script automatically checks all required elements in order to make sure that they are NOT only empty before allowing the form submission, but also that the surfer entered a valid type value. The output is available in 2 ways: into container or with JavaScript Alert() function.
