

Granite Genesis

[DOWNLOAD HERE](#)

Preface.- Acknowledgements.- 1 Introduction.- 1.1 Rock genesis and its relationship to geosystems.- 1.2 Granites, migmatites and granite problems.- 2 Crustal melting: experiments and conditions.- 2.1 Introduction.- 2.2 Mineral melting.- 2.3 Rock melting experimental evidence.- 2.4 Structure and composition of the crust.- 2.5 Water in the crust.- 2.6 Crustal heat and partial melting.- 3. In-situ melting and intracrustal convection: granite magma layers.- 3.1 Introduction.- 3.2 Crustal melting I: Initial melting and partial melt layer.- 3.3 Crustal melting II: Convection and formation of magma layer.- 3.4 Compositional variation within magma layer.- 3.5 Magma layer, granite layer and granite bodies.- 3.6 MI fluctuation (remelting) and granite sequence.- 3.7 Conclusion.- 4. Geological evidence for in-situ melting origin of granite layers.- 4.1 Migmatite to granite.- 4.2 Contact metamorphism.- 4.3 Xenoliths and mafic enclaves.- 4.4 Granite layer and granite exposures.- 4.5 Fluctuation of MI and downward younging granite sequence.- 5. Differentiation of magma layer: geochemical considerations.- 5.1 Introduction.- 5.2 Compositional variation.- 5.3 Strontium isotopes.- 5.4 Oxygen isotopes.- 5.5 Rare earth elements.- 5.6 Summary.- 6. Mineralisation related to in-situ granite formation.- 6.1 Introduction.- 6.2 Source of ore-forming elements.- 6.3 Formation and evolution of ore-bearing fluid.- 6.4 Types of mineral deposits.- 6.5 Age relationships.- 6.6 Temperature distribution.- 6.7 Formation and distribution of hydrothermal mineral deposits.- 6.8 Mineralised depth horizons.- 6.9 Mineralisation during elevated crustal temperatures.- 6.10 Mineralisation during granite remelting.- 6.11 Patterns of element redistribution and element fields.- 6.12 Summary.- 7. Heat source for crustal magma layers: tectonic models.- 7.1 Introduction.- 7.2 Crustal temperature disturbance related to plate convergence.- 7.3 Subduction and granite formation: western Pacific continental margin.- 7.4 Continental collision and granite formation: Tethys Belt.- 7.5 Concluding statement.- 8. Geological effects of crystallisation of a crustal granite magma layer: SE China.- 8.1 Fault-block basins.- 8.2. Volcanism.- 9. Material and element cycling of the continental crust and summary.- 9.1. Rock cycling of continental material.- 9.2. Element cycling of the continental crust.- 9.3. Overview.- References.- Appendix 1 map of SE China.- Appendix 2 Results of experimental rock melting.- Index EAN/ISBN : 9781402058912 Publisher(s): Springer Netherlands

Format: ePub/PDF Author(s): Chen, Guo-Neng - Grapes, Rodney
