

Sendmail - Allow Your Visitors And Potential Customers To Contact You Directly From Your Website.

[DOWNLOAD HERE](#)

Allow your visitors and potential customers to contact you directly from your website. This is very important in an online business. If you users have any questions but can't contact you you could lose customers or regular users on your site. The CWT Sendmail script can also be used as a fun tool where your visitors can send emails from your site to their friends as them selves or anonymously. The HTML is easy to set up and if you have any trouble the help page goes over how to implement the HTML step by step. This script can only be used on one website for each purchase. If you want to have it on two or more websites then you will have to pay again. Features Sends information from a form to your email. Can be used by visitors to send emails to their friends (Optional). If the above feature is used then emails can be sent anonymously (Optional). Send information to more than one emails. Redirect users to any custom page. If no redirect page is set it will redirect to the default page. Sorts form information in the order you choose. Puts the form info in an easy to read fashion. Requirements Perl Sendmail compatible Basic knowledge of HTML
