

New Directions In Mathematical Fluid Mechanics

[DOWNLOAD HERE](#)

Scientific Portrait of A.V. Kazhikhov.- Boundary Control Problems for Stationary Equations of Heat Convection.- Homogenization of the Poisson Boltzmann Equation.- Superconducting Vortices: Chapman Full Model.- Augmented Lagrangian Method and Compressible Visco-plastic Flows: Applications to Shallow Dense Avalanches.- Oscillatory Limits with Changing Eigenvalues.- Finite-dimensional Control for the Navier Stokes Equations.- On the Sharp Vanishing Viscosity Limit of Viscous Incompressible Fluid Flows.- Small Peclet Number Approximation as a Singular Limit of the Full Navier-Stokes-Fourier System with Radiation.- New Perspectives in Fluid Dynamics: Mathematical Analysis of a Model Proposed by Howard Brenner.- Existence of a Regular Periodic Solution to the Rothe Approximation of the Navier Stokes Equation in Arbitrary Dimension.- Optimal Neumann Control for the 2-D Steady-state Navier-Stokes equations.- On Some Boundary Value Problem for the Stokes Equations with a Parameter in an Infinite Sector.- Unilateral Contact Problems Between an Elastic Plate and a Beam.- On Lighthill's Acoustic Analogy for Low Mach Number Flows.- On the Uniqueness of Solutions to Boundary Value Problems for Non-stationary Euler Equations.- On Nonlinear Stability of MHD Equilibrium Figures.- Viscous Flows in Domains with a Multiply Connected Boundary.- Problems with Insufficient Information about Initial-boundary Data.- On the Stability of Non-symmetric Equilibrium Figures of Rotating Self-gravitating Liquid not Subjected to Capillary Forces.- Dynamics of a Non-fixed Elastic Body.
EAN/ISBN : 9783034601528 Publisher(s): Birkhuser Format: ePub/PDF Author(s): Fursikov, Andrei V. - Galdi, Giovanni P. - Pukhnachov, Vladislav V.
