What's your net worth? It's common knowledge (or it should be) & most people know that having more assets than liabilities is the roadmap to wealth! This program will calculate if you owe more debt than what you are worth, or if you are worth more than what you owe! ? Very quick & simple to use! You can even save & load all sessions so you can see how things were the last time you ran the program, & compare it with where you are now & where you will be in the future! ? How It Works: The program starts with the assets screen. You can enter your text in the 'current' column, and what you plan for '5 years down the road'. \*Value Of Your Home \*Other Properties \*Savings \*Shares \*Other Savings \*Value Of Business \*Vehicles \*Trust \*Other Next - simply click the liabilities button which takes you to the next screen. Again - you can enter your text in the 'current' column, and what you plan for '5 years down the road'. \*Mortgages \*Personal Loan \*Purchases \*Student Loan \*Credit Card Debt \*Other Last - simply click the calculate button which takes you to your results screen. The program automatically calculates your results for both 'current' & '5 years down the road'. \*Total Of What You Own (Your Assets) \*Total Of What You Owe (Your Liabilities) \*Your Net Worth This is also where you click a button to save your session, so you can load them when you open the program again - for checking & comparison.
