

# Death Receptors And Cognate Ligands In Cancer

[DOWNLOAD HERE](#)

Death receptors play a central role in directing apoptosis in mammalian cells. This process of active cell death is important for a number of biological processes, e.g. for the regulation of the immune system.

Death receptors are cell surface receptors that transmit apoptotic signals initiated by corresponding death ligands. Many complex signaling pathways are activated and apoptosis is the final result of a complex

biochemical cascade of events. EAN/ISBN : 9783642030451 Publisher(s): Springer, Berlin Format:
