Networks For Pervasive Services

Foreword.- Preface.- Acknowledgements. - 1. On the Way to the Pervasive Web - 1.1 The Net, a Tool for Everyone 1.2 The Inexorable Transformation of Internet applications 1.3 The Application s Mutiny 1.4 Everything on the Move 1.5 New Interaction Paradigms Emerge 1.6 The Scent of Pervasive Applications 1.7 The Billion Dollar Question.- References.- 2 The Network, as We Know It - 2.1 The Multiple Facets of Networks 2.2 Networks from the Eyes of an Ordinary User 2.3 Invite a Programmer to Understand What s in the Cloud 2.4 A Network Engineer to Turn a Switch into a Router 2.5 The Computer Science of a Router 2.6 Simple Math to Stabilize the Net 2.7 Life of a Commuter 2.8 The Three Fundamental Principles.- References.- 3 Six Problems for the Service Provider- 3.1 The Net has Ossified 3.2 Not Truly Ubiquitous 3.3 The Unresponsive Net 3.4 Too Much, Too Stale Signaling 3.5 Lack of Parallelism 3.6 Data Agnosticism 3.7 Inadequate Net-search Engine 3.8 Concluding Remarks.- References.- 4 Spontaneous Networks- 4.1 The Gift of Ubiquity 4.2 Spontaneous Connectivity 4.3 The Hidden-terminal Problem 4.4 The Exposed-terminal Problem 4.5 Preventive Measures to Avoid Collision 4.6 Path Discovery in a Volatile Network 4.7 The KISS Approach.- References.- 5 Reactive Networks- 5.1 Why Networks on Demand? 5.2 A Traffic-free Network 5.3 Our First Path 5.4 Path Management 5.5 Our Second Path 5.6 Global Synchronization 5.7 Error Management 5.8 Remarks on Reactive Networks.- References.- 6 Proactive networks- 6.1 From Reactive to Responsive 6.2 Keep the Network Ready 6.3 How do I Find My Multipoint Relay? 6.4 Life of an OLSR Node 6.5 The Node s Information Repository 6.6 Shortest Path over the MPR Sub-topology 6.7 A Complete Example 6.8 How Proactive Can You Be? 6.9 The Power of Hybrid Protocols.- References.- 7 Content-aware Networks- 7.1 Routers Should Read the Content 7.2 A Network on Top of the Physical Network 7.3 Centralized Assignment of Node Identifiers 7.4 Centralized Entry-point Discovery 7.5 Multiple Bootstrap Servers 7.6 Decentralized Assignment of Node Identifiers 7.7 Entry Point Discovery via Underlying Links 7.8 Content is an Asset at the Edges.- References.- 8 Distribution-efficient Networks- 8.1 Publishing goes beyond Bootstrapping 8.2 The Two Flavors of Virtual Networking 8.3 Creating Unstructured Neighborhoods 8.4 Making Yourself Known in Unstructured Neighborhoods 8.5 Unstructured Resource Publishing 8.6 Secure a Role in Structure Worlds 8.7 Build

Strict Formations 8.8 Place Links and Resources into a Structured Ring 8.9 Data-awareness via Protocol-agnosticism.- References.- 9 Discovering Virtual Resources - 9.1 Four Ways to Reach a Resource 9.2 Assessment of Discovery Mechanisms 9.3 Containing the Proliferation of Discovery Messages 9.4 Blind Discovery for Unstructured Networks 9.5 Informed Discovery in Unstructured Networks 9.6 Discovery in Loosely-Structured Networks 9.7 Deterministic Discovery in Structured Networks.- References.- 10 A Peek at the Future Internet- 10.1 The Fourth Networking Principle: Beyond Mere Connectivity 10.2 Internet of Things: Sense and Influence your Environment 10.3 Small, Large Networks 10.4 Manage the Autonomics 10.5 Dependable Networks 10.6 The Fine Line Between Freedom, Security and Privacy 10.7 Energy-efficient Networks 10.8 No Matter What, the Network will Remain Generative.- References.Index EAN/ISBN : 9789400714731 Publisher(s): Springer, Berlin, Springer Science & Business Media Format: ePub/PDF Author(s): Liotta, Antonio - Exarchakos, George
