Just by being on this website, theres a very good chance that you either have an Internet business or are in the process of starting one. Sadly, the majority of people who start an Internet business will see it fail in the first three months. Whats even worse is that it isnt their fault! Most businesses that fail do so because the business owner lacked just a few key principles for making their business a thriving success. These key principles are extremely simple to master. News Flash: More internet businesses are

failing than ever before... Weve all seen it, a website that looks great and makes you bookmark it to visit at a later date only to find when you try to revisit it, the site is gone! The sad truth is that, while many Internet businesses may look great on the surface, most of them are struggling to even pay their hosting and domain name fees! In fact, more Internet businesses are failing than ever before because competition is so fierce online. Whats worse is that the burst of the dot com bubble many years ago has seen the explosive nature of Internet businesses fade out. Gone are the days that you can just slap up a website and hope that youll become a millionaire. The majority of businesses that come online are gone, out of business, and dead in the water inside of 90 days. Thats an extremely eye-opening statistic. Most people have no idea that the Internet is nothing like the cool stories theyve heard from friends and that it really does require some work. More Competition & A More Discriminatory Customer... The main reasons for the increase in Internet business failure in the last few years are actually two fold... 1) There is much more competition for Internet real estate, advertising campaigns, and the all mighty customer. 2) Every person on the Internet is much more discriminatory when making a purchase decision than they were when the Internet was in its infancy. This means that nearly all businesses face higher advertising costs, less profits, and a more discerning customer eye. The biggest problem with these two fall backs is that the majority of business owners have no clue that they even exist! Thats why they fail and in the end, wonder to themselves Where did I go wrong? which they usually never find the answer to.
