

# Multi-source National Forest Inventory

[DOWNLOAD HERE](#)

List of abbreviations.- Preface.-- 1. Introduction.-- 2. Materials. 2.1 Field data. 2.1.1 Sampling designs. 2.1.2 Measurements and assessments on field sample plots and plot stands. 2.2 Satellite images. 2.2.1 The applied satellite images. 2.2.2 Landsat 5 TM. 2.2.3 Landsat 7 ETM. 2.2.4 IRS-1C and IRS-1D. 2.3 Digital map data. 2.3.1 The use of the map data. 2.3.2 The main sources of map data. 2.3.3 Peatland. 2.3.4 Arable land. 2.3.5 Urban areas, houses and other built-up areas. 2.3.6 Roads. 2.3.7 Water. 2.3.8 Accuracy of the combined land use map data. 2.3.9 Digital boundaries of the computation units. 2.4 Digital elevation model. 2.5 Large area forest resource data.-- 3. Methods. 3.1 Image rectification and pre-processing of data. 3.1.1 Satellite image rectification. 3.1.2 Radiometric correction by means of digital elevation model. 3.1.3 Preparation of input data sets. 3.2 Estimation. 3.2.1 Field data based estimation and reliability analysis. Estimation and error estimation based on the field plot data. 3.2.2 The basic k-NN estimation method. 3.2.3 The improved k-NN (ik-NN) method, use of coarse scale forest variable estimates and genetic algorithm in the distance metric. 3.2.3.1 Simplified sketch of the genetic algorithm. 3.2.3.2 The application of the algorithm. 3.2.4 Selecting estimation parameters and their values for k-NN. 3.2.5 Area and volume estimates stratification, correction for map errors. 3.2.5.1 Calibrated MS-NFI estimators. 3.2.5.2 Stratified MS-NFI. 3.2.5.3 Calibration of the MS-NFI municipality estimates to the official land areas. 3.2.6 Assessing the errors current and potential methods. 3.2.6.1 The current methods in assessing the reliability of the results. 3.2.6.2 Model-based error estimation.-- 4. Results. 4.1 Forest resources by municipalities. 4.2 Comparison of the results by regions and to MS-NFI8 results. 4.2.1 Variables in the comparison. 4.2.2 Mean volume of growing stock. 4.2.3 Dominant tree species. 4.2.4 Age class distribution on forest land. 4.2.5 Distribution of development classes. 4.2.6 Available energy wood. 4.3 Accuracy of small-area estimates from MS-NFI8 and MS-NFI9. 4.3.1 Empirical errors of MS-NFI9 small-area estimates based on independent inventory data. 4.3.2 Assessing the systematic errors of the MS-NFI8 and MS-NFI9 municipality estimates. 4.4 Digital thematic output maps.-- 5. Discussion.-- Acknowledgements.- References.-- Appendix 1. Forest resource tables 1 8.-- Appendix 2. Examples of forest resource maps.-- Index.- EAN/ISBN : 9781402087134 Publisher(s): Springer Netherlands Format:

ePub/PDF Author(s): Gadow, Klaus von - Pukkala, Timo - Tome, Margarida
