

Prime Numbers And Computer Methods For Factorization

[DOWNLOAD HERE](#)

1; PREFACE; 8 2; PREFACE TO THE SECOND EDITION; 9 3; CONTENTS; 10 4; NOTATIONS; 18
5; CHAPTER 1 THE NUMBER OF PRIMES BELOW A GIVEN LIMIT; 20 5.1; What Is a Prime Number?; 20
5.2; The Fundamental Theorem of Arithmetic; 21 5.3; Which Numbers Are Primes? The Sieve of
Eratosthenes; 21 5.4; General Remarks Concerning Computer Programs; 23 5.5; A Sieve Program; 24
5.6; Compact Prime Tables; 26 5.7; Hexadecimal Compact Prime Tables; 28 5.8; Difference Between
Consecutive Primes; 28 5.9; The Number of Primes Below x ; 29 5.10; Meissel's Formula; 31 5.11; Evaluation
of $P_k(x, a)$; 31 5.12; Lehmer's Formula; 32 5.13; Computations; 33 5.14; A Computation Using Meissel's
Formula; 37 5.15; A Computation Using Lehmer's Formula; 39 5.16; A Computer Program Using Lehmer's
Formula; 41 5.17; Mapes' Method; 42 5.18; Deduction of Formulas; 43 5.19; A Worked Example; 45
5.20; Mapes' Algorithm; 49 5.21; Programming Mapes' Algorithm; 51 5.22; Recent Developments; 52
5.23; Results; 53 5.24; Computational Complexity; 54 5.25; Comparison Between the Methods Discussed; 54
5.26; Bibliography; 55 6; CHAPTER 2 THE PRIMES VIEWED AT LARGE; 56 6.1; Introduction; 56 6.2; No
Polynomial Can Produce Only Primes; 56 6.3; Formulas Yielding All Primes; 58 6.4; The Distribution of
Primes Viewed at Large. Euclid's Theorem; 59 6.5; The Formulas of Gauss and Legendre for $\pi(x)$ The
Prime Number Theorem; 60 6.6; The Chebyshev Function $\theta(x)$; 63 6.7; The Riemann Zeta-function; 63
6.8; The Zeros of the Zeta-function; 66 6.9; Conversion From $f(x)$ Back to $\pi(x)$; 68 6.10; The Riemann Prime
Number Formula; 69 6.11; The Sign of $\psi(x) - \pi(x)$; 71 6.12; The Influence of the Complex Zeros of $\zeta(s)$ on $\pi(x)$; 72
6.13; The Remainder Term in the Prime Number Theorem; 75 6.14; Effective Inequalities for $J_r(x)$,
 P_n and $\theta(x)$; 75 6.15; The Number of Primes in Arithmetic Progressions; 76 6.16; Bibliography; 77
7; CHAPTER 3 SUBTLETIES IN THE DISTRIBUTION OF PRIMES; 79 7.1; The Distribution of Primes in
Short Intervals; 79 7.2; Twins and Some Other Constellations of Primes; 79 7.3; Admissible Constellations
of Primes; 81 7.4; The Hardy-Littlewood Constants; 83 7.5; The Prime k -Tuples Conjecture; 85
7.6; Theoretical Evidence in Favour of the Prime k -Tuples Conjecture; 86 7.7; Numerical Evidence in
Favour of the Prime k -Tuples Conjecture; 87 7.8; The Second Hardy-Littlewood Conjecture; 87 7.9; The
Midpoint Sieve; 89 7.10; Modification of the Midpoint Sieve; 89 7.11; Construction of Superdense

Admissible Constellations;90 7.12;Some Dense Clusters of Primes;92 7.13;The Distribution of Primes Between the Two Series $4n + 1$ and $4n + 3$;92 7.14;Graph of the Function $\pi(x) - \pi(x)$;93 7.15;The Negative Regions;93 7.16;The Negative Blocks;96 7.17;Large Gaps Between Consecutive Primes;97 7.18;The Cramer Conjecture;98 7.19;Bibliography;101 8;CHAPTER 4 THE RECOGNITION OF PRIMES;103 8.1;Introduction;103 8.2;Tests of Primality and of Compositeness;103 8.3;Factorization Methods as Tests of Compositeness;104 8.4;Fermat's Theorem as Compositeness Test;104 8.5;Fermat's Theorem as Primality Test;104 8.6;Pseudoprimes and Probable Primes;105 8.7;A Computer Program for Fermat's Test;106 8.8;The Labor Involved in a Fermat Test;108 8.9;Carmichael Numbers;108 8.10;Euler Pseudoprimes;109 8.11;Strong Pseudoprimes and a Primality Test;110 8.12;A Computer Program for Strong Pseudoprime Tests;112 8.13;Counts of Pseudoprimes and Carmichael Numbers;113 8.14;Rigorous Primality Proofs;114 8.15;Lehmer's Converse of Fermat's Theorem;115 8.16;Formal Proof of Theorem 4.3;116 8.17;Ad Hoc Search for a Primitive Root;117 8.18;The Use of Several Bases;118 8.19;Fermat Numbers and Pepin's Theorem;119 8.20;Cofactors of Fermat Numbers;121 8.21;Generalized Fermat Numbers;121 8.22;A Relaxed Converse of Fermat's Theorem;122 8.23;Proth's Theorem;123 8.24;Tests of Compositeness for Numbers of the Form $N = h^2n + k$;124 8.25;An Alternative Approach;124 8.26;Certificates of Primality;125 8.27;Primality Tests of Lucasian Type;126 8.28;Lucas Sequences;126 8.29;The F EAN/ISBN : 9780817682989 Publisher(s): Springer, Berlin, Birkhuser
Discussed keywords: Primzahl Format: ePub/PDF Author(s): Riesel, Hans
