

Role Of Seismic Testing Facilities In Performance-based Earthquake Engineering

[DOWNLOAD HERE](#)

From the contents: 1 The needs of the next-generation Eurocode 8 for experimental research; E.C. Carvalho 2 How can experimental testing contribute to performance based earthquake engineering; F. Taucer, A. Pinto 3 Earthquake and large structures testing at the Bristol Laboratories for advanced dynamic engineering; M. Dietz et al. 4 Experimental earthquake engineering research at LNEC; E. Coelho, A. Campos Costa and P. Candeias 5 EUCENTRE TREES LAB: Laboratory for Training and Research in Earthquake Engineering and Seismology; S. Peloso, A. Pavese and C. Casarotti 6 Structural and behaviour constraints of large scale experiments; Z.T. Rakicevic, D. Jurukovski, and A. Bogdanovic 7 Shaking table testing of models of historic buildings and monuments - IZIS' experience; V. Shendova and Z.T. Rakicevic 8 Towards a new European facility for advanced seismic testing (E-FAST); F. Marazzi, I. Politopoulos, A. Pavese 9 Quality enhancement in seismic testing laboratories based on efficient IT infrastructure deployment; M.H. Zaharia and G. Atanasiu 10 Use of large numerical models and high performance computers in geographically distributed seismic tests; U. Dorka and F. Obon 11 Actuator performance requirements for earthquake engineering testing; L. Di Horu et al. 12 Computer Vision System for advanced high precision displacement measurements; F. Lunghi et al. 13 Laminar shear box design for seismic soil-structure interaction studies; L. Di Horu et al. 14 Soil-Structure Interaction : cross-facility validation of dynamic centrifuge testing; U. Cilingir et al. 15 Impact of the qualification of seismic testing facilities; M. Zola 16 Qualification of testing procedures, instrumentation and equipment management in large testing facilities in earthquake engineering; .Kur et al. 17 Nonstructural testing research needs to support performance based seismic design; J. Gatscher 18 Experimental evaluation of the seismic performance of steel buildings with passive dampers using real-time hybrid simulation; T. Karavasilis et al. 19 Performance limits for reinforced concrete columns under severe displacement cycles; B. Acun and H. Sucuoglu 20 Experimental study of progressive collapse of conventional and post-tensioned steel frames; A. Tsitos and G. Mosqueda 21 Experimental investigation of the behaviour of pinned beam to column connections to seismic loading; I. Psycharis, H. Mouzakis and G. Kremmyda

22 Dynamic behaviour of reinforced soil: theoretical modelling and shaking table experiments; J. Soubestre et al. EAN/ISBN : 9789400719774 Publisher(s): Springer, Berlin, Springer Netherlands
Discussed keywords: Erdbebensicheres Bauen, Ingenieurgeologie, Seismik Format: ePub/PDF Author(s): Fardis, Michael N. - Rakicevic, Zoran T.
