Mechanics Of Microelectronics

[DOWNLOAD HERE](#)

Microelectronics technology- Introduction- A heart of silicon- In a little black box- Baseline CMOS- Non-CMOS options- Packaging- Systems- Conclusions- References- Nomenclature- Reliability practices- Introduction- Reliability assessment- Reliability statistics- Acceleration factor models- Failure mechanisms- Conclusions- References- Exercises- Thermal Management- Introduction- Heat transfer basics- Thermal design of assemblies- Thermal design for a SQFP- Heatsink design choices- Conclusions / final remarks- References- Introduction to Advanced Mechanics- Introduction- Stress and strain- Failure criteria- Fracture mechanics- Finite element method- References- Exercises- Thermo-Mechanics of Integrated Circuits and Packages- Introduction- IC Backend and packaging processes and testing- Thermo-mechanics of IC backend processes- Thermo-Mechanics of packaging processes- Thermo-Mechanics of coupled IC backend and packaging processes- Case studies- References- Exercises- Characterization and Modeling of Moisture Behavior- Introduction- Moisture diffusion modeling- Characterization of moisture diffusivity and saturation concentration- Vapor pressure modeling- Hygroscopic swelling characterization & modeling- Single void Instability behavior Subjected to vapor pressure and thermal stress- Interface strength characterization and modeling- Case studies- References- Exercises- Characterization and Modeling of Solder Joint Reliability- Introduction- Analytical-empirical prognosis of the reliability- Thermo-mechanical characteristics of soft solders- Data evaluation and LIFE-time estimation- Case studies- References- Exercises- Virtual thermo-mechanical prototyping - Introduction- The state-of-the-art of virtual prototyping - Case studies- Conclusions- References- Exercises- Challenges and future perspectives- Introduction- Product and process inputs- Tests and experiments- Multi-scale mechanics- Advanced simulation tools- Multi-physics modeling- Material and interface behavior- Simulation-based optimization- Conclusions- References EAN/ISBN : 9781402049354 Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Zhang, G. Q. - Driel, Willem Dirk van - Fan, X. J.
