An interesting mix of electronic and classical music, with influences from rock and video game music as well. 16 MP3 Songs ELECTRONIC: Experimental, CLASSICAL: Orchestral Details: Synthetic Motion is the moniker of electronic musician Andrew Garraway. His debut album, "Catalyst", is a collection of various songs written over the past 5 years. Tracks range from the high-energy "Bad Water," to soft and slow with songs like "Dust Bunnies Drifting" and "Struggle." Influences and styles come from all directions on this album, ranging from other electronic/techno/industrial music, classical and baroque orchestral compositions, various rock and pop artists and a very heavy influence from numerous video game soundtracks. The song "Intermission (Go Play a Videogame)" sounds like it could be straight from a classic NES title even though it's a completely original track. But words can only say so much when it comes to music, so please listen to it yourself. There are free demos available on CDBaby.com, at the official site, syntheticemotionand various other websites.
