

Diapause In Aquatic Invertebrates

[DOWNLOAD HERE](#)

From the contents: PART I: Strategies and Mechanisms of Diapause in Aquatic Invertebrates- 1. INTRODUCTION TO DIAPAUSE, Victor R. Alekseev, Oscar Ravera & Bart T. De Stasio- 1. Diagnosis of diapause, 1.2 Ecological causes of diapause in aquatic organisms, 1.3 Terminology on dormancy - 2. TIMING OF DIAPAUSE IN MONOGONONT ROTIFERS: MECHANISMS AND STRATEGIES, John J. Gilbert- 2.1 Introduction, 2.2 Female types and the fertilized resting egg, 2.3 The timing of sex: environmental controls, 2.4 The Timing of sex: endogenous controls, 2.5 General mechanistic models for the control of mixis, 2.6 Theoretical models for maximizing resting-egg production, 2.7 Diapausing parthenogenetic eggs, 2.8 Acknowledgments- 3. DIAPAUSE IN CRUSTACEANS: Peculiarities of Induction, Victor R. Alekseev- 3.1 Introduction, 3.2 Diapause in crustacean life cycles, 3.3 Presence of diapause among crustaceans, 3.4 Evolution of points of view on inducing factors, 3.5 Diapause as a photoperiodic response, 3.6 Light as the source of information about the season, 3.7 Role of temperature and photoperiod in diapause induction, 3.8 Population density and manifestations of photoperiodic reactions, 3.9 Food quality and diapause induction in Crustacea, 3.10 Population polymorphism and inheritance of photoperiodic responses, 3.11 Heredity of photoperiodic responses, 3.12 Acknowledgments- 4. REACTIVATION OF DIAPAUSING CRUSTACEANS, Victor R. Alekseev - 4.1 Introduction, 4.2 Patterns of reactivation processes for different types of diapause, 4.3 Endogenous phase of diapause, 4.4 Reactivation action of oxygen, 4.5 Participation of carbon dioxide in reactivation, 4.6 Hormonal basis of diapause, 4.7 Acknowledgments- 5. DIAPAUSE IN AQUATIC INSECTS, WITH EMPHASIS ON MOSQUITOES, Elena B. Vinogradova- 5.1 Introduction, 5.2 Mosquitoes (Culicidae), 5.3 Other groups of aquatic insects, 5.4 Acknowledgments- 6. A BRIEF PERSPECTIVE ON MOLECULAR MECHANISMS OF DIAPAUSE IN AQUATIC INVERTEBRATES, Victor R. Alekseev- 6.1 Introduction, 6.2. Molecular mechanism of diapause in nematode *Caenorhabditis elegans*, 6.3 Acknowledgments- PART 2: The Role of Diapause in Science and Human Uses- 7. EGG BANK FORMATION BY AQUATIC INVERTEBRATES: A BRIDGE ACROSS DISCIPLINARY BOUNDARIES, Bart T. De Stasio- 7.1 Introduction, 7.2 Dormancy processes, 7.3 Egg bank size and dynamics, 7.4 Creating an egg bank, 7.5

Conclusion, 7.6 Acknowledgements- 8. USE OF CLADOCERAN RESTING EGGS TO TRACE CLIMATE-DRIVEN AND ANTHROPOGENIC CHANGES IN AQUATIC ECOSYSTEMS, Susanne L. Amsinck, Erik Jeppesen & Dirk Verschuren- 8.1 Introduction, 8.2 Tracing acidification, 8.3 Tracing eutrophication, 8.4 Tracing fish introductions and biomanipulation, ... EAN/ISBN : 9781402056802
Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Alekseev, Victor R. - Stasio, Bart T. - Gilbert, John J.
