

The Arithmetic Of Fundamental Groups

[DOWNLOAD HERE](#)

From the contents: Part I Heidelberg Lecture Notes: 1 Heidelberg lectures on Coleman integration by A.Besser.- 2 Heidelberg lectures on fundamental groups by T. Szamuely.- Part II The Arithmetic of Fundamental Groups: 3 Vector bundles trivialized by proper morphisms and the fundamental group scheme, II by I. Biswas and J.P.P. dos Santos.- 4 Note on the gonality of abstract modular curves by A. Cadoret.- 5 The motivic logarithm for curves by G.Faltings.- 6 On a motivic method in diophantine geometry by M.Hadian.- 7 Descent obstruction and fundamental exact sequence by D. Harari and J. Stix.- 8 On monodromically full points of configuration spaces of hyperbolic Curves by Y.Hoshi.- 9 Tempered fundamental group and graph of the stable reduction by E.Lepage.- 10 / abelian-by-central Galois theory of prime divisors by F.Pop.- 11 On p -adic pro-algebraic and relative pro- fundamental groups by J.P.Pridham.- 12 On 3-nilpotent obstructions to π_1 sections for $1 \leq n \leq 3$ by K.Wickelgren.- 13 Une remarque sur les courbes de Reichardt Lind et de Schinzel by O.Wittenberg.- 14 On p -adic iterated integrals V : linear independence, properties of p -adic polylogarithms, p -adic sheaves by Z. Wojtkowiak.- Workshop Talks EAN/ISBN : 9783642239052 Publisher(s): Springer, Berlin Format: ePub/PDF Author(s): Stix, Jakob
