

Dressing Method In Mathematical Physics

[DOWNLOAD HERE](#)

INTRODUCTION- 1 Mathematical preliminaries- 1.1 Intertwine relations. Ladder operators- 1.2 Factorization of matrices. - 1.3 Factorization of L -matrix.- 2 Factorization and dressing- 2.1 Left and right division of ordinary differential operators. Bell polynomials.- 2.2 Generalized Bell polynomials.- 2.3 Division and factorization of differential operators. Generalized Riccati equations.- 2.4 Darboux transformation. Generalized Burgers equations.- 2.5 Darboux transformations in associative ring with automorphism. Quasideterminants.- 2.6 Joint covariance of equations and nonlinear problems.- 2.7 Example. Nonabelian Hirota system.- 2.8 Second example. Nahm equation.- 2.9 On symmetry and supersymmetry. - 3 Darboux transformations- 3.1 Gauge transformations and general definition of DT.- 3.2 Basic notations: algebraic objects.- 3.3 Zakharov - Shabat equations for two projectors. Elementary DT.- 3.4 Elementary and binary Darboux Transformations for ZS equations with three projectors.- 3.5 General case. Elementary and binary Darboux transformations.- 3.6 The limit case - analog of Schlesinger transformation.- 3.7 N-wave equations.- 3.8 Higher combinations. Hirota-Satsuma (integrable CKdV) and KdV-MKdV equations.- 3.9 Infinitesimal transforms for iterated DTs.- 3.10 Geometric aspect.- 4 Applications in linear problems- 4.1 Integrable potentials in quantum mechanics.- 4.2 Darboux transformations in continuous spectrum. Scattering problem.- 4.3 Radial Schrödinger equation.- 4.4 Darboux transformations and potentials in multidimensions.- 4.5 Zero-range potentials, dressing and electron-molecule scattering.- 4.5 Linear Darboux auto-transformation.- 4.6 One-dimensional Dirac equation.- 4.7 Non-stationary problems.- 4.8 Dressing in classical mechanics. One-dimensional problems.- 4.9 Poisson form of dynamics equations. Darboux theorem for classical evolution.- 5 Dressing chain equations- 5.1 Scalar case. The Boussinesq equation.- 5.2 Chain equations for noncommutative field formulation.- 5.3 The example of Zakharov-Shabat problem.- 5.4 General operator. Stationary equations as eigenvalue problems and chains.- 5.5 Finite closures of the chain equations. Finite-gap solutions.- 6 The dressing in $2+1$ - 6.1 Laplace transformations.- 6.2 Combined Darboux-Laplace transforms.- 6.3 Moutard transformation.- 6.4 Goursat transformation.- 6.5 The addition of the lower level to spectra of matrix and scalar components of $d=2$ SUSY Hamiltonian.- 7 Important links- 7.1 Bilinear

formalism. The Hirota method.- 7.2 Bcklund transformations.- 7.3 Singular manifold method.- 7.4 General ideas for integral equations.- 7.5 The Zakharov-Shabat theory.- 7.6 Reduction conditions.- 8 Dressing via the local Riemann-Hilbert problem- 8.1 The RH problem and generation of new solutions.- 8.2 The nonlinear Shchringer equation.- 8.3 The modified NLS equation.- 8.4 The Ablowitz-Ladik equation.- 8.5 Three wave resonant interaction equations. - 8.6 Homoclinic orbits by the dressing method.- 9 Dressing via the non-local RH problem- 9.1 The Benjamin-Ono equation.- 9.2 The Kadomtsev-Petviashvili I equation.- 9.3 The Davey-Stewartson I equation.- 9.4 The modified Kadomtsev-Petviashvili I equation.- 10 Generating new solutions via the d-bar problem- 10.1 Elements of the d-bar formalism.- 10.2 The KdV equation with self-consistent source.- 10.3 The NLS, modified NLS, and modified Manakov equations with self-consistent source.- 10.4 The Kadomtsev-Petviashvili II equation.- 10.5 The Davey-Stewartson II equation.- CONCLUSION - REFERENCES- AUTHOR INDEX- SUBJECT INDEX EAN/ISBN : 9781402061400 Publisher(s): Springer Netherlands Discussed keywords: Mathematische Physik Format: ePub/PDF Author(s): Doktorov, Evgeny V. - Leble, Sergey B.
