

# Ecology, Economy And State Formation In Early Modern Germany

[DOWNLOAD HERE](#)

Original case study of how a peasant society in early modern Europe sustained its economy. This is an innovative analysis of the agrarian world and growth of government in early modern Germany through the medium of pre-industrial society's most basic material resource, wood. Paul Warde offers a regional study of south-west Germany from the late fifteenth to the early eighteenth century, demonstrating the stability of the economy and social structure through periods of demographic pressure, warfare and epidemic. He casts light on the nature of 'wood shortages' and societal response to environmental challenge, and shows how institutional responses largely based on preventing local conflict were poor at adapting to optimise the management of resources. Warde further argues for the inadequacy of models that oppose the 'market' to a 'natural economy' in understanding economic behaviour. This is a major contribution to debates about the sustainability of peasant society in early modern Europe, and to the growth of ecological approaches to history and historical geography.
