

Solvation Effects On Molecules And Biomolecules

[DOWNLOAD HERE](#)

Chapter 1 - Solvation models for molecular properties: continuum versus discrete approaches- (Benedetta Mennucci)- Chapter 2 - The multipole moment expansion solvent continuum model: a brief review- (Manuel F. Ruiz-Lpez)- Chapter 3 - The Discrete Reaction Field approach for calculating solvent effects- (Piet Th. van Duijnen, Marcel Swart, and Lasse Jensen)- Chapter 4 - Thermochemical Analysis of the Hydration of Neutral Solutes- (Axel Bidon-Chanal, Jose Mara Lpez, Modesto Orozco, and F. Javier Luque)- Chapter 5 - Electronic properties of hydrogen bond networks: implications for solvent effects in polar liquids- (Silvia Gomes Estcio, Hugo F. M. C. Martiniano, Paulo Cabral do Couto, and Benedito Jose Costa Cabral)- Chapter 6 - Solvent effects on radiative and non-radiative excited state decays- (Aurora Muoz Losa, Ignacio Fdez. Galvn, M. Elena Martn, and Manuel A. Aguilar)- Chapter 7 - The sequential QM/MM method and its applications to solvent effects in electronic and structural properties of solutes- (Kaline Coutinho, Robert Rivelino, Herbert C. Georg, and Sylvio Canuto)- Chapter 8 - Statistical Mechanical Modeling of Chemical Reactions in Condensed Phase Systems- (Andrea Amadei, Massimiliano Aschi, and Alfredo Di Nola)- Chapter 9 - An explicit quantum chemical solvent model for strongly coupled solute{solvent systems in ground or excited state- (Anders hrn and Gunnar Karlstrm)- Chapter 10 - Molecular Dynamics Simulation Methods including Quantum Effects- (Thomas S. Hofer, Bernhard R. Randolph, and Bernd M. Rode)- Chapter 11 - Solvation in Polymers- (Hossein Eslami, and Florian Mller-Plathe)- Chapter 12 - Hydrogen bonds and solvent effects in soil processes: a theoretical view- (Daniel Tunega, Adelia J. A. Aquino, Georg Haberhauer, Martin H. Gerzabek, and Hans Lischka)- Chapter 13 - Linear Response Theory in Connection to Density Functional Theory/Molecular Dynamics and Coupled Cluster/Molecular Dynamics Methods- (Kestutis Aidias, Jacob Kongsted, and Kurt V. Mikkelsen)- Chapter 14 - Combined QM/MM methods for the simulation of condensed phase processes using an approximate DFT approach- (Marcus Elstner and Qiang Cui)- Chapter 15 - Solvation of Hydrogen Bonded Systems: CHO, OHO, and Cooperativity- (Steve Scheiner)- Chapter 16 - Solvation in Supercritical Fluids- (Ana C. Furlan, Frank W. Fvero, Javier Rodriguez, Daniel Laria, and Munir S. Skaf)- Chapter 17 - A Quantum Chemical Approach to Free Energy Calculation for Chemical Reactions in

Condensed System: Combination of a Quantum Chemical Method with a Theory of Statistical Mechanics- (Hideaki Takahashi, Nobuyuki Matubayasi, and Masayoshi Nakano)- Chapter 18 - Quantifying Solvation Effects on Peptide Conformations: A QM/MM Replica Exchange Study- (Gustavo M. Seabra, Ross C. Walker, and Adrian E. Roitberg) EAN/ISBN : 9781402082702 Publisher(s): Springer Netherlands, Springer Science & Business Media Format: ePub/PDF
