

Infrasound Monitoring For Atmospheric Studies

[DOWNLOAD HERE](#)

Part I. History, Instrumentation, Network.- 1. The Characteristics of Infrasound, its Propagation and Some Early History.- 2. The IMS Infrasound Network: Design and Establishment of Infrasound Stations.- 3. Monitoring the Earth's Atmosphere with the Global IMS Infrasound Network.- 4. Specifications of Low-Noise Broadband Microbarometers.- 5. A Review of Wind-Noise Reduction Methodologies.- Part II. Sources, Observations, and Propagation. 6. Worldwide Observations of Infrasonic Waves.- 7. Infrasonic Observations of Open Ocean Swells in the Pacific: Deciphering the Song of the Sea.- 8. Generation of Microbaroms by Deep-Ocean Hurricanes.- 9. Acoustic-Gravity Waves from Earthquake Sources.- 10. Seismic Waves from Atmospheric Sources and Atmospheric/Ionospheric Signatures of Seismic Waves.- 11. Acoustic-Gravity Waves from Impulsive Sources in the Atmosphere.- 12. Meteor Generated Infrasound: Theory and Observation.- 13. High-latitude Observations of Infrasound from Alaska and Antarctica: Mountain Associated Waves and Geomagnetic/Auroral Infrasonic Signals.- 14. Some Atmospheric Effects on Infrasound Signal Amplitudes.- 15. Atmospheric Variability and Infrasound Monitoring.- Part III. Propagation Modeling in a Realistic Atmosphere.- 16. On the Prospects for Acoustic Sounding of the Fine Structure of the Middle Atmosphere.- 17. Numerical Methods to Model Infrasonic Propagation Through Realistic Specifications of the Atmosphere.- 18. Misty Picture: A Unique Experiment for the Interpretation of the Infrasound Propagation from Large Explosive Sources.- 19. Ground Truth Events: Assessing the Capability of Infrasound Networks Using High Resolution Data Analyses.- Part IV. Atmospheric Investigations from Global Continuous Infrasound Monitoring. 20. Contribution of Infrasound Monitoring for Atmospheric Remote Sensing.- 21. Global Scale Monitoring of Acoustic and Gravity Waves for the Study of the Atmospheric Dynamics.- 22. Dynamics and Transport in the Middle Atmosphere Using Remote Sensing Techniques from Ground and Space.- 23. The Representation of Gravity Waves in Atmospheric General Circulation Models (GCMs).- 24. Inversion of Infrasound Signals for Passive Atmospheric Remote Sensing. EAN/ISBN : 9781402095085 Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Le Pichon, Alexis
