A one-stop reference for all medical professionals who encounter ethicolegal problems during their management of patients. Clinical decisions in modern medical practice are increasingly influenced by ethical and legal issues, but few doctors have been formally trained in medical law and ethics, and are unsure of potential sources of accessible information, which leaves them exposed to public criticism and the threat of legal action. Perioperative medicine and critical care are, by their very nature, subjects in which issues of autonomy, dignity, consent, confidentiality, medical research, life and death decision making, and the rationing of health care resources are ever-present. This book provides a straightforward but comprehensive one-stop reference and should be essential reading for all medical and allied health care professionals who encounter ethicolegal problems during their management of patients.
