Heavily influenced by the eighties, this mostly instrumental album contains many of the synthesizer sounds of that era. Contains funk, electro, synthpop as well as a little bit of club. 13 MP3 Songs ELECTRONIC: Electro, ELECTRONIC: Electronica Show all album songs: Flashback Songs Details: I'm a solo musician from the Netherlands. I've played piano in the past, but got bored with it. During lawschool I felt an urge to do something more creative. Around 2000, I started looking for software to create house music with, a genre I had always been interested in. It just always seemed that you needed loads of equipment to be able to make it yourself so I hoped that there was a cheap solution. Fortunately I found exactly what I was looking for and it had a cute name: Fruity Loops. I fell in love with it and been working with it ever since, never really wanting to try other software because it has got all that I need. I've been making trance, electro, techno and ambient as well as a bit of drum and bass, triphop and dub over these past years. I've made over 50 tracks that I consider albumworthy with some finetuning. The first album will be called Flashback and be available here end of 2007. After that, a trance album will appear from me. Variety will be the constant factor as well as melodic tunes and a chilled out sound. Some of my tunes might rock the dance floor but primarily this is music for the listeners. I hope you enjoy it as much as I do. My primary focus is enjoying making music and getting it out there to you people.
