The third edition of this bestselling book provides new material on sleep disordered breathing, new methods for the staging of lung cancer, interstitial lung diseases and infections -- all of which have grown in importance since the previous edition. The traditional areas of respiratory medicine remain strongly represented and the new edition contains many new radiological illustrations. The book contains integrated self-test questions, illustrations and detailed explanations. It is designed to educate as well as give answers to problems. The cases appear in random order and at varying levels of difficulty, mimicking how patients present in practice. The Color Review will appeal to a wide readership, ranging from senior medical students and post-registration trainees in internal medicine, to pulmonologists in training and practice, for examination revision and continuing education.
