

# Heat Shock Proteins In Cancer

[DOWNLOAD HERE](#)

The Hsp90 Chaperone Machinery Acts at Protein Folding Clefts to Regulate Both Signaling Protein Function and Protein Quality Control.- Implications of heat shock proteins in carcinogenesis and cancer progression.- HSF1: An Emerging Factor In Cancer.- Anti-apoptotic, tumorigenic and metastatic potential of Hsp27 (HspB1) and  $\alpha$ B-crystallin (HspB5): emerging targets for the development of new anti-cancer therapeutic strategies.- Heat Shock Protein-27 (Hsp-27) In Breast Cancers: Regulation Of Expression and Function.- Role of Heat Shock Protein Hsp25/27 in the Metastatic Spread of Cancer Cells.- Heat shock chaperone mortalin and carcinogenesis.- Role of molecular chaperones in cell senescence.- Involvement of heat shock proteins in protection of tumor cells from genotoxic stresses.- Hsp70 In Tumors: Friend Or Foe?.- HSP70 and HSP27 as pharmacological targets in apoptosis modulation for cancer therapy.- Heat Shock Protein 90: The Cancer Chaperone.- Targeting Hsp90 Function to Treat Cancer: Much More to Be Learned.- Small-molecule Hsp90 Inhibitors: Applications in Cancer and Neurodegenerative diseases.- Drugging the HSP90 molecular chaperone machine for cancer treatment.- Cdc37 and protein kinase folding.- The Elevated Levels of Heat Shock Proteins In Cancer: A Suitable Case For Treatment?.- Hsp70-Based Anticancer Vaccines: Chaperoning The Immune Response.- Piloting of exogenous antigen into cross-presentation pathway by heat shock proteins. EAN/ISBN : 9781402064012 Publisher(s): Springer Netherlands Format: ePub/PDF Author(s): Calderwood, Stuart K. - Sherman, Michael Y. - Ciocca, Daniel R.
