

# Monitoring Ecological Impacts

[DOWNLOAD HERE](#)

Provides clear and useable protocols for the detection and measurement of human impacts on the environment. Monitoring Ecological Impacts provides the tools needed by professional ecologists, scientists, engineers, planners and managers to design assessment programs that can reliably monitor, detect and allow management of human impacts on the natural environment. The procedures described are well grounded in inferential logic, and the statistical models needed to analyse complex data are given. Step-by-step guidelines and flow diagrams provide the reader with clear and useable protocols, which can be applied in any region of the world and to a wide range of human impacts. In addition, real examples are used to show how the theory can be put into practice. Although the context of this book is flowing water environments, especially rivers and streams, the advice for designing assessment programs can be applied to any ecosystem. EAN/ISBN : 9780511034329 Publisher(s): Cambridge University Press Format: ePub/PDF Author(s): Downes, Barbara J. - Barmuta, Leon A. - Fairweather, Peter G.
