Electronic music with a decent political and philosophical touch. One hour of diagnosis what went wrong with your feelings and finding out what and who passed your personal firewall without permission. 15 MP3 Songs ELECTRONIC: Techno, ELECTRONIC: Ambient Details: In 1992, kNORT and aGe2.1 founded the all-electronic producer Team Pilzfeld Records. After 10 years of work on several electronica projects, they decided to create an industrial-music oriented project, which then was named Wertstahl. Wertstahls music has its sources of influence from bands such as Kraftwerk, Skinny Puppy, Frontline Assembly and The Klinik, to name only a few. The Album ://Firewall focuses on social security matters in combination with recent technology and political issues. It features a very wide collection of sounds, describing many different emotional states of the mind. ://Firewall surely is the debut album of Wertstahl, but finally its the 10th longplayer by Pilzfeld Records, who are well known in germany for their weird ambient project "Das Neue Universum" (The New Universe). Wertstahls first album deals with new technology songwriting (all compositions were created during conference sessions on the internet), brings up facts and sound documents of 9/11, the surrounding terrorist activities and social difficulties. It can finally be seen as one hour of diagnosis what went wrong with your feelings and finding out what and who passed your personal firewall without permission. Maybe this helps upgrading your security measures!
