JOOLS (PC GAME) Jools is a graphical puzzle game in the tradition of Tetris. It is a clone of Bejeweled , an excellent game. In a nutshell, the goal is to swap adjacent jools (jewels) within a grid, in order to create rows of three or more of a kind. These jools will then disappear, and more will fall to fill their places. Jools features nifty 3D rendered graphics. System Requirements: Windows 98, 2000, ME, NT, XP, Vista & 7
