ForexMoonSecret indicator how the system works: Step 1. Defining a starting impulse. In order to define the very first impulse used in the algorithm, a combination of a few built-in indicators is used, (particularly MA, RSI, Stochastic) and two proprietary indicators by Rita Lasker. Such a transition would allow pinpointing with exact accuracy the trends turn-around point Step 2. False signals filter. Now, this is THE most important point! Everyone knows that there are plenty of indicators capable of defining a point of entry in the market. However, they are all faulty due to showing very high numbers of false positives. In that block all of the impulses go through a logic-filter that at its core has our revolutionary and patented Forex MoonShift DS algorithm. This filter filters out roughly about 60 of false positives and does about 20 of time corrections. Step 3. Sending a signal to a trader. Formed signal is being sent to a trader. The methods of notifications are extensively explained in the Signals section. Who this system is for: For all traders, who admire comfort and love being in good spirit For all traders, who hate being jumpy, nervous, tired, having red eyes from lack of sleep. For professional traders, aspiring to attain bigger and better things instead of working for pennies at hedge-funds. For beginner trader, willing to receive the knowledge and turn profit instead of having a ruined health, broken families and being disappointed with Forex. For traders being worn out by scalping and being tossed around from one system to the other its

time for you to relax. Youve found what youve been looking for What Will You Receive After Purchase ?
