

Mp3 Rick Quarles - Science On The Wild Side

[DOWNLOAD HERE](#)

Humorous, educational songs about science and nature in a variety of styles - including rock, country, blues, reggae, bluegrass, and rap by the Singing Science Teacher. Music to sing, dance, and learn by. For all ages - students, parents, and teachers. 14 MP3 Songs KIDS/FAMILY: Children's Pop, KIDS/FAMILY: General Children's Music Details: Im Rick Quarles and Ive been the Singing Science Teacher for 12 years now. Ive been featured on a major universitys Integrated Science Program videos that are broadcast throughout the U.S. and parts of Canada. Ive taught both 6th and 7th grade science (life and physical as well as general science). Ive always enjoyed doing activities and labs with my students as well as entertaining them with music and involving them with musical science skits. My original songs include a lot of science vocabulary and concepts in physical, earth, and life science set to all kinds of musical styles rock n roll, rhythm and blues, country, bluegrass, blues, rap, and even easy listening. Teachers use the songs for instruction and reinforcement during the labs and activities. Students can even make up verses and dances to them. These songs are for all ages children, parents, and teachers. My background in playing with various bands over the years, my interest in science, and my humor (one of my favorite authors was Shel Silverstein) gives me resources to write and record science and nature songs that are a little different from the norm. Thats why I call it Science On The Wild Side.
