# Apphp Calendar

[DOWNLOAD HERE](#)

The ApPHP Calendar is a powerful PHP calendar script that may be easily integrated and used with various PHP projects, such as schedulers, event processors etc. The calendar is very simple to install, implement and use. ApPHP Calendar has a user-friendly interface and navigation. It can be viewed in various ways - yearly, monthly, weekly, daily and list view. Our calendar script is more than just some boxes on a screen. We offers a comprehensive suite of events publishing, viewing and statistical information. The script allows you to improve and simplify event exposure and publishing. With features of ApPHP Calendar you can configure access for different user types.
