

# Brainwave Therapy - Deep Learning

[DOWNLOAD HERE](#)

Do you ever wonder why as children we learn more in our first few years of life? The answer lies in the mysterious and elusive Theta brain wave state. Up until the age of six, children are predominantly in Theta. This frequency allows the brain to absorb and retain massive amounts of information that gets stored in long-term memory. You can restore this magical ability through daily Theta brain wave training. When you need to study and assimilate new information, slip on your headphones, relax and listen to Deep Learning. Within minutes, memory receptors are gently stimulated as precision-engineered frequencies shift your brain into perfect balance. In this state of heightened receptivity, the clarity and speed with which you can concentrate, study, and integrate and store information is profoundly improved. Theta brain waves are associated with long-term-potential. Use Deep Learning For: Super learning Receiving inner direction and insights Self-hypnosis Behavior modification Improving Memory Instructions for listening: Listen to this program daily for either thirty or sixty minutes a day to train your brain to develop more Theta activity. Regular use will enhance overall mental performance. Here are three ways to use Deep Learning. Experiment to explore which way works best for you and your needs. 1. Thirty minutes before studying, lie down, close your eyes and listen to Deep Learning. This will prepare your brain for absorbing new information. 2. Or, listen to Deep Learning while you study. 3. Listen to Deep Learning to relax, unwind or meditate. After regular use you'll notice a dramatic increase in your ability to retain and retrieve information. What You Can Expect: Increased creativity Improved memory Enhanced ability to focus and concentrate Greater clarity of thought Expanded awareness
