

# Cereal Genomics

[DOWNLOAD HERE](#)

Preface.- 1. Cereal genomics: An overview.- 2. Molecular marker systems and their evaluation for cereal genetics.- 3. Molecular maps in cereals: methodology and progress.- 4. Organization of microsatellites and retrotransposons in cereal genomes.- 5. Comparative genomics in cereals.- 6. Population genetic structure of wild barley and wheat in the Near East Fertile Crescent: Regional and local adaptive patterns.- 7. Gene and genome changes during domestication of cereals.- 8. QTLs and genes for disease resistance in barley and wheat.- 9. QTLs and genes for tolerance to abiotic stress in cereals.- 10. Marker-assisted selection in the cereals: The dream and the reality.- 11. Map-based gene isolation in cereal genomes.- 12. Gene distribution in cereal genomes.- 13. Whole genome sequencing: methodology and progress in cereals.- 14. Bioinformatics and Triticeae genomics: resources and future developments.- 15. Functional genomics studies of seed development in cereals.- 16. Functional genomics for tolerance to abiotic stress in cereals.- 17. The Arabidopsis genome and its use in cereal genomics.- 18. Rice genome as a model system for cereals.- 19. Cereal genomics research in post-genomic era.- 20. Genomics for cereal improvement.- Appendix I: List of contributors. Appendix II: List of reviewers. EAN/ISBN : 9781402023590 Publisher(s): Springer Netherlands, Springer US Discussed keywords: Gen-Analyse / Genom-Analyse, Getreide Format: ePub/PDF Author(s): Gupta, P. K. - Varshney, R. K.
