System Identification With Quantized Observations

DOWNLOAD HERE

Preface. Conventions. Glossary of Symbols.- Part I. Overview. Introduction. System Settings.- Part II. Stochastic Methods for Linear Systems. Empirical-Measure-Based Identification Using Binary-Valued Observations. Estimation Error Bounds from Unmodeled Dynamics. Rational Systems. Quantized Identification and Asymptotic Efficiency. Input Design for Identification in Connected Systems. Identification of Sensor Thresholds and Noise Distribution Functions.- Part III. Deterministic Methods for Linear Systems. Worst-Case Identification under Binary-Valued Observations. Identification Using Quantized Observations.- Part IV. Identification of Nonlinear and Switching Systems. Identification of Wiener Systems with Binary-Valued Output Observations. Identification of Hammerstein Systems with Quantized Observations. Systems with Markovian Switching Parameters.- Part V. Complexity Analysis. Space and Time Complexities, and Sensor Threshold Selection and Adaptation. Impact of Communication Channels on System Identification. Appendix. Background Materials. References. Index. EAN/ISBN : 9780817649562 Publisher(s): Birkhuser, Springer Science & Business Media Format: ePub/PDF Author(s): Wang, Le Yi - Yin, G. George - Zhang, Ji-Feng
