

All Whois - Cdomain Pro Cloneware

[DOWNLOAD HERE](#)

ALL WHOIS CDOMAIN PRO CLONEWARE Works just like cdomain. Increased the speed of performance with all the features a professional registrar needs. All whois does everything cdomain pro boasts only better. Enables researching domain name availability for all registrars (not just internic). This script is a nice service for webhosting companies. Allows user to search for domain name availability with ANY registrar. Also does global searches based on keywords so if you can't register party you can search all the other NIC's in the world (i.e. .uk, .mx, etc.) to see if you can register something like party.uk.co or whatever. Adding new registrars is a snap and installation takes maybe 2 minutes.
