Details: ***** REVISED 08/04/05:

***** Introducing GARY BEAR (a.k.a. KELVIN 296). "BABYLON BENEATH THE STARS" is this artist's first full length release. It has 19 songs, 1 spoken word, one song reprised with different vocal delivery, and, is 41 minutes long. Translated from the original Arctonite Space Bear and formatted to a 19.5 to the power of 52 earth modulation frequency standard. There is an alternate reality. Out of that there are stories. Out of stories there is this: BABYLON BENEATH THE STARS--a manufactured CD, not a burned CD-R. Or, visit the "garybearmusic.com" website to find paths to digital download sources. (A link to website subsists in that sidebar over there on the left...further down...under "LINKS" if you are on the CD BABY web page. If you are reading this where it was reposted on another website, I don't know where that link is.) Unlike the governments of the world who tax you and make you pay for things whether you want them or not, at no additional charge "Babylon Beneath the Stars" comes with REAL freedom of choice. You CHOOSE to buy it...or not. What? What genre? I know not. I write, I perform, I translate for Arctonite Space Bears; but, I don't do genres. Somewhere in the pop, rock, folk, eclectic spectrum. Hey! How about if YOU suggest a genre? Simply check out the audio clips and use the e-mail link on this web page to suggest what genre this music fits.

***** NOTE: "GARY BEAR" is a simple name for this artist's public activities. This artist's REAL NAME, however (in English, as it is not in Ancient Japanese) is

his entire life. In a word...a very long name indeed. *****
