Design and Engineering of WDM Systems and Networks provides the professional scientist, company engineer as well as the university researcher with the basic skills, concepts and simulation/design techniques so as to begin design and engineering of optical communication systems and networks at various layers. The intention is to demonstrate the effectiveness of computer-aided design when it comes to network engineering and prototyping. The latest in semi-analytical system simulation techniques are applied to optical WDM systems and networks and a review of the various current areas of optical communications is presented. Simulation is mixed with experimental verification and engineering to present the industry as well as research state-of-the-art.
