

Wifi To Remote Controller - Turn Devices To Remote Controll

[DOWNLOAD HERE](#)

Turn your phone into a remote media controller for your computer. This is a simple and easy to use script and software that allows you to use any wifi device like mobile phones, psp, ipods, and other wifi devices as remote controllers for your computers media player. If you have a media center computer or a computer used to play off media at home, you can now use this script in combination with the following software as a media remote controller. The script goes through internet so there is no distance limit, no complicated setups, and it works on all modern devices that are able to connect to the internet! This is a revolutionary new script that offers the full functionality of media remote controller. Now you can remotely control your computers media player from basically anywhere... it can be miles away from your computer and it would still work.
