

Chapter 03, People, Policy And Politics In Future Climates

- Ann Henderson-sellers

[DOWNLOAD HERE](#)

Good environmental governance is fundamental to addressing climate change and the possibility of a transition to sustainability. This applies equally for local communities, countries, regions, and, ultimately, global society. Several scholars have considered the elements required for good environmental governance. The influence that global human society is perpetrating on future climates of the Earth is related to population, politics, policy, and ethics. People are at a fork in the road, or a turning point where the environmental decisions of citizens, public officials, political leaders, business and labor leaders, diplomats, and scientists are critical. Climate change has been on the agenda of international agencies, governments around the globe, and local authorities. International co-operation via the United Nations Framework Convention on Climate Change (UNFCCC, 1992) and its Kyoto Protocol is greatly lacking as evidenced by the outcome from Copenhagen in 2009. The many local initiatives that have been taken up are praiseworthy. Political scientists have made contrasting assessments of human capacity to curb emissions on a global scale.
