Epic instrumental synthesizer musique in the style of Baroque Minimal Electro. For fans of Vangelis, Wendy Carlos, Air, and M83, this is an album for a movie that has not yet been made. 13 MP3 Songs ELECTRONIC: Soundscapes, ELECTRONIC: Ambient Details: Symbion Project is proud to announce the release of their 3rd full length album! "wound up by god or the devil" is the soundtrack to a movie that has not yet been made. this is an album that symbion project did not expect to make; this is an album that you probably did not expect to hear. encapsulated within are collisions or epic forces, chaotic sexuality, religious underpinnings, melancholy moments frozen in time, enlightened fragments of joy. while taking 3 week respite from working on another full length Symbion album, "wound up by god or the devil" literally burst into existence. moved by the epic nature of Vangelis (blade runner, chariots of fire) the retro/future aesthetic of Wendy Carlos (clockwork orange, tron), Symbion Project created a "baroque minimalist electro" album that could live seamlessly in 1762, 1972, 2162. concerned with the non-dynamic, robotic stagnancy of current electronic music, along with the overwhelming nature of being surrounded by a studio full of synthesizers blinking audio gear, this dynamic album was crafted using only a single 16vco analog synthesizer. very little was sequenced (except for the blazingly fast runs that Bach himself couldn't do!) almost all the parts were played in by hand. constant attention was given to exploiting exaggerating the emotional tension of the songs through the use of dynamics, from the initial songwriting to the final mastering (analog of course). Symbion Project is one of the many musical endeavours of Kasson Crooker, also known as The Duke of Pannekoeken in the synthpop trio Freezepop, and was in the electronic rock band Splashdown. visit symbionprojectfor info on the band, sound clips, and how to purchase the cd.
