BIOGRAPHY Fil Eisler simply is "iZLER" (That's pronounced EYE-ZLER) and nothing short of an incredibly talented artist. iZLER first came to prominence in the UK as a key member of Robbie Williams' band. Their various tours encompassed venues from clubs to football stadiums, where Fil's adrenaline fueled stage presence began to grow. It was these shows that brought him to the attention of Mike Smith of EMI Music UK who signed him as an artist in his own right. His solo career began in the summer of 2002 when he left his adoptive home of the UK (Fil was born in Prague, Czech Republic) and traveled to New York City. Armed with a pen, paper, guitar and his tireless work ethic he quickly made a name for himself around the NYC club scene. Not even a freak accident of being hit by a runaway taxi was going to stop him from fulfilling his goals. With the help of Brooklyn producer Steve Walsh, iZLER recorded his self-titled debut album (Out on May 18th 2004), financing the project himself. iZLER: "I felt it was important to record an album that I loved with my own family of players and without a major label involved. After all it's me that's got to live with the fuckin' thing! I think this way, we made a record that I dig and that people could fall in love with for a long time." iZLER is now based out of the "City of Angels" and plans are being made to tour behind the record's release. His talent to create great rock songs adding a pop sensibility combined with a ferocious stage presence makes him quite an exciting act to witness.
