

The Pullback Equation For Differential Forms

[DOWNLOAD HERE](#)

From the contents: Preface.- Notation.- 1 Introduction.- Part I Algebraic Preliminaries.- 2 Basic Properties and the Notion of Divisibility.- Part II Hodge Decomposition and the Poincare Lemma.- 3 Notation.- 4 An Identity Involving Exterior Derivatives and Gaffney Inequality.- 5 The Hodge Morrey Decomposition.- 6 First Order Elliptic Systems of Cauchy Riemann Type.- The Poincare Lemma.- Part III The Case $k=n$ of Volume Forms.- 8 The Case $f \geq 0$. 9 The Case Without Sign Hypothesis on f .- 10 Appendix 1: The Equation $\operatorname{div} u = f$.- 11 Appendix 2: Degree Theory.- Part IV The Case $0 \leq k \leq n-1$.- 12 General Considerations on the Flow Method.- 13 The Cases $k = 0$ and $k = 1$.- 14 The Case $k = 2$.- 15 The Case $3 \leq k \leq n-1$.- 16 Appendix 3: Necessary Conditions.- 17 Appendix 4: An Abstract Fixed Point Theorem.- 18 Appendix 5: Dimension Reduction.- Part V. Hlder Spaces.- 19 Hlder Continuous Functions.- Bibliography.- Index. EAN/ISBN : 9780817683139 Publisher(s): Springer, Berlin, Birkhuser Discussed keywords: Differenzialgeometrie, Partielle Differenzialgleichungen Format: ePub/PDF Author(s): Csati, Gyula - Dacorogna, Bernard - Kneuss, Olivier
