

Advanced Dynamics And Model-based Control Of Structures And Machines

[DOWNLOAD HERE](#)

From the contents: T. Adachi, M. Higuchi: Development of integral modelling of functionally-graded syntactic foams. - C. Adam, C. Jaeger: Dynamic instabilities of simple inelastic structures subjected to earthquake excitation. - V. K. Astashev: Nonlinear dynamics and control of ultrasonic technology processes and systems. - T. A. Beliakova, E. V. Lomakin, Yu. P. Zezin: Experimental studies of thermoviscohyperelastic behaviour. - A. K. Belyaev: Example of instability in drive mechanism. - F. Casciati, Li Jun Wu: Positioning systems -- global versus local. - S. Casciati, L. Faravelli, ZhiCong Chen: Real-time multichannel cable replacement for structural control. - M. Egretzberger, K. Graichen, A. Kugi: Flatness-based MPC and global path planning towards cognition-supported pick-and-place tasks of tower cranes. - T. Furukawa: Stress focusing effect of an elastic solid in the context of generalized thermoelasticity. - E. S. Gorkunov: Magnetoelastic effect as applied to estimating elastic-plastic strains in steels and optimization of technological processes. - C. Hametner, S. Jakubek: On the potential of constraints in nonlinear system identification. - R. Heuer: Vibration control of linear elastic beam structures with spatial local nonlinearities. - A. Hofer, F. Kitanoski: Energy optimal feedforward control of a cooling system. - D. A. Indeitsev, A. K. Abramyan, B. N. Semenov: Vibration control of a fluid in micro- and nanotubes. - H. Irschik et al.: A model reduction technique for high speed flexible rotors. - M. Krommer, Y. Vetyukov: Monitoring of structural deformations/vibrations superposed upon finite pre-deformations. - G. A. Leonov, N. V. Kondrat'eva: Electromechanical and mathematical models of salient-pole synchronous motors. - V. P. Matveenکو et al.: Optimization of dynamic characteristics of electroviscoelastic systems with external electric circuits. - N. F. Morozov, P. E. Tovstik: Control of surface waviness. - K. Nachbagauer, C. Zehetner, J. Gerstmayr: Nonlinear finite element modelling of moving beam vibrations controlled by distributed actuators. - J. Rehrl, M. Horn: Model-based control of heating ventilating and air-conditioning components. - E. K. Reichel, B. Jakoby: Microsensors based on mechanical vibrating structures. - K. Schlacher, M. Schoeberl, M. Staudecker: Flatness-based control of linear and nonlinear systems. - K. Watanabe: Wave radiation from a stick-slip-like source motion

(SH-wave). - Y. B. Yang, S. R. Kuo, J. L. Peng, M. H. Shih: Derivation of the instability potential of plates by rigid body and equilibrium considerations. - F. Ziegler, B. Khalid: A novel base isolation system for asymmetric buildings in seismic active zones: damping supplied by tuned liquid column-gas dampers. EAN/ISBN : 9783709107973 Publisher(s): Springer, Berlin, Springer, Wien Format: ePub/PDF Author(s): Irschik, Hans - Krommer, Michael - Belyaev, A. K.
