1;Title Page;4 2;Copyright Page;5 3;Table of Contents;6 4;Preface;10 5;Chapter 1 Random Graphs and Branching Processes;16 5.1;1. Introduction;17 5.2;2. Models;20 5.2.1;2.1. Classical models;20 5.2.2;2.2. Random graphs with a fixed degree sequence;24 5.2.3;2.3. Inhomogeneous models;27 5.2.4;2.4. Models with independence between edges;28 5.2.5;2.5. A general sparse inhomogeneous model;30 5.2.6;2.6. Independence and clustering;33 5.2.7;2.7. Further models;34 5.3;3. The Phase Transition in  $G(n, p)$ ;35 5.3.1;3.1. Historical remarks;36 5.3.2;3.2. Local behaviour;41 5.3.3;3.3. The giant component;44 5.3.4;3.4. Stronger results for  $G(n, p)$ ;47 5.3.5;3.5. The subcritical case;51 5.3.6;3.6. The supercritical case;61 5.4;4. The Phase Transition in Inhomogeneous Random Graphs;69 5.4.1;4.1. Graphs with a given degree sequence;69 5.4.2;4.2. Robustness of the BA or LCD model;71 5.4.3;4.3. The uniformly grown models and Dubins model;73 5.4.4;4.4. Graphs with independence between edges;77 5.4.5;4.5. Applications of non-Poisson branching processes;80 5.5;5. Branching Processes and Other Global Properties;85 5.5.1;5.1. Diameter;85 5.5.2;5.2. The k-core;88 5.6;6. Appropriateness of Models: Metrics on Graphs;91 5.6.1;6.1. The edit distance(s): dense case;92 5.6.2;6.2. The subgraph distance: dense case;95 5.6.3;6.3. The cut metric: dense case;97 5.6.4;6.4. The sparse case;99 5.6.5;6.5. New metrics and models;103 5.7;References;105 6;Chapter 2 Percolation, Connectivity, Coverage and Colouring of Random Geometric Graphs;117 6.1;1. Introduction;117 6.2;2. The Gilbert Disc Model;118 6.2.1;2.1. Percolation;119 6.2.2;2.2. Connectivity;120 6.2.3;2.3. Coverage;121 6.2.4;2.4. Colouring;123 6.2.5;2.5. Thin strips;125 6.3;3. The k-nearest Neighbour Model;128 6.3.1;3.1. Percolation;128 6.3.2;3.2. Connectivity;129 6.3.3;3.3. Sharp thresholds;131 6.4;4. Random Tessellations;132 6.4.1;4.1. Random Voronoi Percolation;133 6.4.2;4.2. Random Johnson Mehl Percolation;137 6.5;5. Outlook;138 6.6;References;139 7;Chapter 3 Scaling Properties of Complex Networks and Spanning Trees;143 7.1;1. Random Graphs and Complex Networks;143 7.2;2. The Bollobas Configuration Model;145 7.3;3. Percolation on Random Graphs;146 7.3.1;3.1. Generating functions;147 7.3.2;3.2. Critical exponents;149 7.3.3;3.3. Fractal dimensions;151 7.4;4. Weighted Networks;154 7.4.1;4.1. Shortest paths in networks;154 7.4.2;4.2. Strong and Weak Disorder;155 7.4.3;4.3. Minimum Spanning Trees;156

7.4.4;4.4. Fractal properties of optimal paths;158 7.5;5. Fractal Networks;160 7.5.1;5.1. The cluster growing method;160 7.5.2;5.2. The box covering method;160 7.5.3;5.3. The fractal nature of scale free networks;161 7.6;6. Fractal Properties of Network Boundaries;163 7.6.1;6.1. Distribution of outer shells population;164 7.6.2;6.2. Component size distribution;165 7.7;7. Summary;165 7.8;References;166 8;Chapter 4 Random Tree Growth with Branching Processes a Survey;170 8.1;1. Random Tree Model;170 8.1.1;1.1. Notation;171 8.1.2;1.2. The Model;172 8.1.2.1;1.2.1. Discrete Time Model;173 8.1.2.2;1.2.2. Continuous Time Model;173 8.1.3;1.3. Some Additional Notation;175 8.2;2. Local Properties;176 8.2.1;2.1. Statement of Results;176 8.2.2;2.2. Linear Weight Function;178 8.2.3;2.3. Proof of Convergence in Probability;179 8.3;3. Branching Processes;188 8.4;4. Global Properties;191 8.4.1;4.1. Notation and Question;191 8.4.2;4.2. Markov Property;193 8.4.3;4.3. Fragmentation of Mass;195 8.4.3.1;4.3.1. Linear Weight Function;195 8.4.3.2;4.3.2. Binary Tree;197 8.5;References;200 9;Chapter 5 Reaction-diffusion Processes in Scale-free Networks;202 9.1;1. Introduction;202 9.2;2. Analytical Description of Diffusion-annihilation Processes in Complex Networks;207 9.2.1;2.1. Heterogeneous mean-field formalism;207 9.2.2;2.2. Finite networks: Diffusion-limited regime;212 9.2.3;2.3. Infinite networks: Continuous degree approximation;214 9.3;3 EAN/ISBN : 9783540693956 Publisher(s): Springer, Berlin Format: ePub/PDF Author(s): Bollobas, Bela - Kozma, Robert - Miklos, Dezso
