

Immunodiagnosics And Patient Safety

[DOWNLOAD HERE](#)

1;Contents;6 2;Preface;10 3;Abbreviations;12 4;Part I Immunoassay: Theory, practice, and patient safety;14 4.1;1 Immunochemical methods Basic principles and definitions;16 4.1.1;1.1 Antibody as immunoassay reagent;16 4.1.2;1.2 Antigen as immunoassay reagent;20 4.1.3;1.3 The course of the immunochemical reaction;20 4.1.4;1.4 Immunoassay formats;22 4.1.5;1.5 Labels in immunochemical reactions;27 4.1.6;1.6 Separation of bound and unbound fractions;27 4.1.7;1.7 Other technologies based on the antigen-antibody reaction;28 4.1.8;1.8 Basic theory of immunoassay and patient safety;29 4.2;2 Immunoassay standardization;30 4.2.1;2.1 Reference materials for small molecules;30 4.2.2;2.2 Reference materials for proteins;31 4.2.3;2.3 Reference methods;32 4.2.4;2.4 Reference methods for heterogeneous proteins;33 4.2.5;2.5 Traceability;33 4.2.6;2.6 The uncertainty of measurement;34 4.2.7;2.7 Epitope as a solution for better standardization;36 4.2.8;2.8 Harmonization of immunoassays;37 4.2.9;2.9 Immunoassay standardization and the patient s safety;37 4.3;3 Immunoassay calibration and calibration curve fitting;40 4.3.1;3.1 Calibration process;40 4.3.2;3.2 Commutability problem;41 4.3.3;3.3 Matrix effect;41 4.3.4;3.4 Calibration and patient safety;42 4.4;4 Reference intervals and immunoassay;44 4.4.1;4.1 General problems with reference intervals for analytes measured by immunoassay;44 4.4.2;4.2 Limitation of different approaches to reference intervals;45 4.4.3;4.3 Reference intervals and patient safety;46 4.5;5 Laboratory preanalytical and analytical phase of immunoassay;48 4.5.1;5.1 Laboratory preanalytical factors and immunoassay;48 4.5.2;5.2 Blood collection devices;49 4.5.3;5.3 Anticoagulants;50 4.5.4;5.4 Hemolysis, lipemia, hyperbilirubinemia, paraproteinemia, and immunoassay;50 4.5.5;5.5 Analyte stability in fresh and frozen serum samples;51 4.5.6;5.6 Analytical phase in immunoassay measurement;53 4.6;6 Human natural antibodies and immunoassay;56 4.6.1;6.1 The human immune system;56 4.6.2;6.2 Chemical structure of immunoglobulins;57 4.6.3;6.3 Antigen-combining site and complementarity-determining regions;58 4.6.4;6.4 Genes for immunoglobulin variable regions;59 4.6.5;6.5 Diversification of immunoglobulins in vivo;60 4.6.6;6.6 Natural antibody against exogenous (nonself) and endogenous (self) antigens;61 4.6.7;6.7 Natural antibodies and patient safety;64 4.7;7 Immunoassay interference How to recognize,

eliminate, or reduce it;66 4.7.1;7.1 Definition and prevalence of interference in immunoassay;66 4.7.2;7.2 Cross-reactivity versus interference in immunoassay;67 4.7.3;7.3 Analyte specific and nonspecific binding proteins as a source of interference in immunoassay;72 4.7.4;7.4 Autoantibodies as a source of interference;76 4.7.5;7.5 Nonimmune IgG complexes as a source of interference;79 4.7.6;7.6 Interference from heterophilic antibodies;82 4.7.7;7.7 Detection of heterophilic antibodies in the patient s sample;91 4.7.8;7.8 Methods used for removal or inactivation of interfering heterophilic antibodies;102 4.7.9;7.9 High-dose effect (hook effect, prozone effect);105 4.7.10;7.10 Low-dose hook effect;108 4.7.11;7.11 Interference from heterophilic antibodies and patient safety;109 4.7.12;7.12 Interpretation of immunoassay results is an art;110 4.8;8 Immunoassay and patient safety;116 4.8.1;8.1 Fallibility of immunoassays;116 4.8.2;8.2 Know your immunoassay;118 4.8.3;8.3 Basic knowledge on critical points in immunoassay for physicians;123 4.8.4;8.4 Immunoassay in research;126 4.8.5;8.5 Who is responsible for the patient s safety?;126 5;Part II Immunochemistry measurements in practice: Examples of problems in some current immunoassays;128 5.1;Example 1 Parathyroid hormone (PTH) Heterogeneity as a major problem in PTH measurement by immunochemistry;130 5.2;Example 2 Human chorionic gonadotropin (hCG) Problems of heterogeneity and lack of standardization;136 5.3;Example 3 Troponin m EAN/ISBN : 9783110249484 Publisher(s): De Gruyter Format: ePub/PDF Author(s): Sztefko, Krystyna
