

Mark Levinson No 31 Original Owner Operating Manual

Front panel

1 standby

When the N°31 is connected to AC power and the **main power** switch on the rear panel is in the "1" position (see "Rear panel"), pressing this button takes the N°31 out of 'standby' mode and enables the front-panel controls.

When the N°31's **main power** switch is first turned on (or when power is restored after an interruption), the N°31 will be ready to operate (that is, it won't be in standby mode).

Pressing **standby** again places the N°31 into standby mode and disables the front-panel controls.

While the N°31 is in standby mode, the Display is dark and the **standby** LED flashes slowly. When the N°31 is ready to operate (not in standby mode), the **standby** LED remains lighted.

Note: When going into standby, the N°31 deactivates its digital outputs. With some digital processors, this may result in a low-level "pop" on the audio outputs (*linked* Mark Levinson digital processors aren't subject to this effect).

To prevent this low-level "pop" from coming through your system's speakers or headphones, adjust the volume to its lowest level before placing the N°31 into standby.
