

Integral Methods In Science And Engineering, Volume 2

[DOWNLOAD HERE](#)

Preface.- List of Contributors.- Error Bounds for L1 Galerkin Approximations of Weakly Singular Integral Operators.- Construction of Solutions of the Hamburger Lwner Mixed Interpolation Problem for Nevanlinna Class Functions.- A Three-Dimensional Eutrophication Model: Analysis and Control.- An Analytical Solution for the Transient Two-Dimensional Advection Diffusion Equation with Non-Fickian Closure in Cartesian Geometry by the Generalized Integral Transform Technique.- A Numerical Solution of the Dispersion Equation of Guided Wave Propagation in N-Layered Media.- Discretization of Coefficient Control Problems with a Nonlinear Cost in the Gradient.- Optimal Control and Vanishing Viscosity for the Burgers Equation.- A High-Order Finite Volume Method for Nonconservative Problems and Its Application to Model Submarine Avalanches.- Convolution Quadrature Galerkin Method for the Exterior Neumann Problem of the Wave Equation.- Solution Estimates in Classical Bending of Plates.- Modified Newton s Methods for Systems of Nonlinear Equations.- Classification of Some Penalty Methods.- A Closed-Form Formulation for Pollutant Dispersion in the Atmosphere.- High-Order Methods for Weakly Singular Volterra Integro-Differential Equations.- Numerical Solution of a Class of Integral Equations Arising in a Biological Laboratory Procedure.- A Mixed Two-Grid Method Applied to a Fredholm Equation of the Second Kind.- Homogenized Models of Radiation Transfer in Multiphase Media.- A Porous Finite Element Model of the Motion of the Spinal Cord.- Boundary Hybrid Galerkin Method for Elliptic and Wave Propagation Problems in R^3 over Planar Structures.- Boundary Integral Solution of the Time-Fractional Diffusion Equation.- Boundary Element Collocation Method for Time-Fractional Diffusion Equations.- Wavelet-Based Hlder Regularity Analysis in Condition Monitoring.- Integral Equation Technique for Finding the Current Distribution of Strip Antennas in a Gyrotropic Medium.- A Two-Grid Method for a Second Kind Integral Equation with Green s Kernel.- A Brief Overview of Plate Finite Element Methods.- Influence of a Weak Aerodynamics/Structure Interaction on the Aerodynamical Global Optimization of Shape.- Multiscale Investigation of Solutions of the Wave Equation.- The Laplace Transform Method for the Albedo Boundary Conditions in Neutron Diffusion Eigenvalue Problems.- Solution of the Fokker Planck Pencil Beam Equation for Electrons by the Laplace Transform Technique.-

Nonlinear Functional Parabolic Equations.- Grid Computing for Multi-Spectral Tomographic
Reconstruction of Chlorophyll Concentration in Ocean Water.- Long-Time Solution of the Wave Equation
Using Nonlinear Dissipative Structures.- High-Performance Computing for Spectral Approximations.- An
Analytical Solution for the General Perturbed Diffusion Equation by an Integral Transform Technique.-
Index. EAN/ISBN : 9780817648978 Publisher(s): Birkhuser Format: ePub/PDF Author(s): Constanda,
Christian - Prez, Maria E.
