Seo Rank Finder

DOWNLOAD HERE

This is a cool little program (works with Windows, Mac, and Linux) that will track your SEO ranking for hundreds of keywords with a single click. Why is this better than the rest? By using the Google AJAX API this program can bypass all restrictions that most SEO tracking software comes up against, particularly those that use screen scraping technologies that will get you blocked in Google after just a few keyword searches. * There are NO limits to the number of keywords you can search (although you should break them down into smaller groups for faster results) * You will NOT get banned from Google for using this to track your rank * There are NO bloated features that take weeks to learn - one click and youll have your results. Easy as pie. Why should you buy this program? Because this is the simplest program youll ever use... And itll show you where your SEO weak spots are so your competition cant sneak up behind you and crush your websites. Master Resale Rights Included!
