Game Boy Electronic Music. Micro elektro Dance Rock, 8bit, 8 bit, lo-fi, micromusic, Vic20, micro music, video game, Chip tune, Sid tune, music, electronic, intellivision, game boy, c64, Genesis, pc engine, turbo grafx 16, atari, commodore 64, nintendo, 14 MP3 Songs ELECTRONIC: Dance, KIDS/FAMILY: Children's Pop Details: ComputeHer is Michelle. Michelle uses many classic video game consoles and computers to make outrageously intricate toe-tapping music! Many of the instruments she uses are toys she grew up with, like: Game Boy (the Grey Classic), Commodore 64, Nintendo Entertainment System, Atari 2600, Speak n spell, and more! ComputeHers music creates an atmosphere of fun and excitement that anyone, of any age, can enjoy! ComputeHer has just delivered her 1st Audio/CD release, in the form of a Limited Edition Album! Simply titled, Data Bass, her debut release will both surprise and delight anyone who enjoys chip tunes and micro music alike! ComputeHer's debut CD album Data Bass is a hand crafted original 5 inch floppy disk. It IS a CD, but it's made to look like a vintage floppy disk. You do not play it in your computer, but in your CD player, like any other CD. Each "disk" has a numbered, limited edition, collector's sleeve. In addition to the 11 songs of the album itself, it has 3 bonus tracks only available with this limited edition release! There are only 500 copies made, so get yours today! Each CD is just \$14.95 USD. Again, this is an audio CD and not a floppy disk for your computer. :) ComputeHer has recently collaborated with Mark Mothersbaugh of Devo and Mutato Muzika making sound FX for video games. Michelle has been quoted as saying: "I love making music with my Game Boy! I have always loved playing the old games from the 1980s! Some of my favorite games are Burger Time, Little Computer People, Donkey Kong, Pac-Man, Pitfall, Silo64, Maniac Mansion, Mission Impossible, Space Taxi Caveman Ughlympics. I grew up playing the Commodore 64, Intellivision, NES and Game Boy so I've always been partial to the older game systems. I do play on the newer systems. Some of the games I

play are Animal Crossing, The Sims and Chibi Robo and I recently fell in love with the Xbox 360...but my heart is still with the 1980s games! :]" ComputeHer CDBaby recently featured ComputeHer on their home page and had this to say : "Forget electronic music, here's computer pop. While the bulk of the initial appeal lies in the chip tunes' ability to conjure up lazy summer days spent getting Mario past the Koopa Troopas, this lady is pretty smart about it; there are some stand-alone songs here. The digital songstress, known only as "Michelle," has deconstructed tons of sounds you remember from such classic gadgets as Speak'n'Spell, the ol' Commodore 64, Atari 2600, and the original gray NES (and Game Boy!), and pieced them all together into a veritable symphony of nostalgia through robot pop songs. Sure, it's entertaining for those of us who remember what 8-bit graphics looked like (...especially those of us who might just have an ancient stack of ColecoVision and Atari cartridges waiting for us at home at the end of the day... ahem...), but these are great little pop tunes ready for anyone ready to dance." -CDBaby computeher.net
