Parser Worm Burner Xtractorpro MULTILEVEL EMAIL AUTORESPONDER REPLICATOR THE
ULTIMATE OPT-IN EMAIL PROMOTION CGI Script that allows you to sell or give away autoresponder
email addresses that send out unlimited followup emails to subscribers. Subscribers can be manually
added or just email the recipient. Secure admin and webmaster area provide detailed statistics and
management of mailing lists. Admin may add custom footers and headers to all outgoing email. Remove
link function. Setup is a breeze. POWER SAFELIST PRO EASY TO SETUP SAFELIST OPT IN EMAIL
SYSTEM WITH AUTOMATIC BILLING CGI Script sets up in seconds and interfaces with any paypal
account for easy automated billing. Even charge monthly recurring billing for your subscribers! New users
simply click a button to signup! They get a confirmation email with instructions which you can customize.
Custom headers and footers. Everything you need to quickly setup a money making safelist service.
Works with paypal billing. DOMAIN NAME APPRAISER REAL TIME WHOIS SCANNER FOR EXPIRED
NAMES IN SEARCH ENGINES CGI Script scans our DAILY UPDATED EXPIRED DOMAIN DATABASE
for domain names with high search engine presence. Scans all the search engines that matter including
google, lycos, msn, altavista... Threshold value allows you to cutoff loser domains with less than
interesting presence. SEARCH ENGINE KEYWORD HARVESTER SCAN FOR POPULAR SEARCH
ENGINE PHRASES This script allows you to scan for popular search engine words and phrases derived
from your search word. Also allows filtering undesirable words (badword list) which can be modified on
the fly. Great for generating doorway pages or getting ideas for domain names or buying search engine
keywords. PAYPAL SHOPPING CART SHOPPING CART FOR USE WITH PAY PAL Shopping cart that
uses Paypal Pay Pal payment checkout. Takes 5 seconds to setup. All code automatically generated.
You dont even have to set permissions. Just upload the files and set 2 paths and you are ready to rip.
Design your shopping mall anyway you like by simply inserting the generated itemcode into your website

for seamless design integration. My 2 year old can set up this program. Handles shipping charges and everything else you would expect ON HOLD DOMAIN SCANNER CGI SCRIPT FINDS DOMAINS ON HOLD JUST LIKE THE PROS DNSRESEARCH sells lists for hundreds to THOUSANDS of dollars and is making a FORTUNE doing EXACTLY this. Its STUPID. You get a big list of domain names. Sort them out into lists which are about to expire and sell them as onhold domain lists. This is the secret to the entire business. DNS RESEARCH TOOL DNS analyzation tool Very useful script for DNS and network analysis. Also useful for network security. Script can be altered to do a number of really cool DNS functions as well. Easy to use interface for NETNS perl module. Gathers complete DNS records and does comprehensive lookups in batches. HTML ROTATOR Say goodbye to advertising as you know it. This is the new revolution! MYSQL backend database system allows you to rotate HTML. Similar to a banner rotator in concept but allows rotation of complete HTML (including images, javascript, any HTML tags). HTML can be rotated as an exit system, rotate your start page or you can rotate a frame in a page or just a paragraph or WORD inside any HTML page. It gets better though! This rotator also allows you to categorize your system with unlimited categories of rotations. In other words you can setup a category example such as marketing or webhosting and only rotate HTML ads appropriate for that target audience. You can sell your ad space however you like (exit pages, frames, whatever) and each client is provided a login to check their stats. If you have a client with multiple ads the convenient interface lets them see all their stats with ONE single user/pass so they dont have to be bothered remembering 500 different passwords - although that is optional too. You can also setup to expire one of two ways. Accounts can be set to expire by number of impressions (when the account holder exceeds the set number of impressions their ad automatically expires). Accounts can also be set to expire by number of days (flat rate advertising). This offers you a dual marketing approach to selling your valuable banner space. We use this very same system to sell ads on our site and it works great. System load is virtually undetectable. All stats are in real-time. Admin panel allows you to browse all accounts and their individual statistics, view all ads at once, modify/delete accounts, and even check the overall stats to your server. Single installation can run ads on unlimited sites. AUTOMATIC MYSQL BACKUP Automate backup and archival of your MYSQL databases Simple to install script which completely automates backup and archival of any or all of your mysql databases. You can use in combination with Nightly Backup to even backup to remote servers. Easy to install and reliable. Date stamps each backup so you have no worries about 0k database

backups! Just plug this script in and all your MYSQL backup needs are done automatically.

MICROCITIES Inserts headers and footers on the fly into HTML Geocities Style Now you can setup a true geocities clone not only on a dedicated server but on a VIRTUAL SERVER! If you are using a dedicated server our AUTOMATIC USERADD program combined with a little tweaking completely automates the setup of REAL ftp, telnet, webspace, and email pop accounts. Now add on this program to insert HTML headers and or footers on the fly on every webpage! You can even set this up to work in just a subdirectory of a domain or the whole domain! The applications are endless. Use to put ads at the top and bottom of forums, guestbooks, wwwboards, you name it. Script allows you to choose extensions affected (.htm, .html, .shtml, etc) and sets up in seconds! No compiling or hacking apache. This is the easiest and once again the FIRST program of its kind on the net. SUPER SORTER Sorts any file alphabetically and removes duplicates A CGI Script that you can use to sort and organize ANY text file database. Use it to cleanup email lists, URL lists, addressbooks, absolutely any text file can be quickly sorted into alphabetical order and all duplicates removed. Great tool to use with the whois parser so you dont waste time querying whois over and over for the same domain name. Also a great tool to sort through address books and lists of URLs if you are building a search engine. Works great for flatfile search engines such as matchmasters (not pro version) where you can quickly delete all of the duplicate submissions made from people hitting the submit button multiple times. A great tool for any webmaster. REGEXFILTER PHRASE FINDER Batch Find and Replace Spider Drop this CGI script into any directory on your webserver and run it from the browser or telnet and it instantly does a search and replace (or delete) for any regular expression(s) in every file present inside the directory structure. Smartspider technology locates all files and will completely probe even the most complex subdirectory trees. Use it to replace (for example) any slogan, menubar, graphic link, phrase, misspelled word(s), old phone numbers, etc. Best of all is you can use this tool to remove all of those stupid MICROSOFT spam HTML tags & for example from your entire website. The CGI script counts, logs and reports on all files filtered in real time. CGI script is extremely fast.
