

## Float-in Window Generator

[DOWNLOAD HERE](#)

A Pop-Up window works by instantly opening a completely separate "new browser window" that pops into view whenever someone enters or exits your website. Pop-Up Blockers work by automatically stopping any and all webpages that are programmed to open in a separate "new browser window". Thus when a visitor running any kind of pop-up blocking software lands on your page the pop-up window is blocked automatically and your advertisement- is never seen. Next, let's examine the attention grabbing power of "Float-In Windows" and why they cannot be blocked, killed or destroyed. "Float-In Windows" are simply a part of your web page and don't require a new browser window to be opened. Although they appear to be a separate window they are actually a part of the same web page that they gracefully float-in to. "Float-In Windows" don't require a New Browser Window to be opened therefore they CANNOT be blocked, killed, or destroyed. Tags: profit, web
