From the reviews of the third edition: RAD-Magazine, Nov. 2006: "There is a lot of knowledge and experience between the two book covers, which is well presented..." "This third edition of Imaging of soft tissue tumors has been considerably enlarged by using the bank data of the Belgian Soft Tissue Neoplasm Registry. This new edition should be recommended to radiologists and nuclear medicine doctors, surgeons, oncologists, graduated or in training, but it is also of interest for the specialists related to the different soft tissues."
